

Willis Solasyphon

Additional Information

- Approved for grant purposes
- Performance independently tested and verified by the University of Ulster
- Supported by Invest NI
- International Patent Application
No PCT/EP2007/008915
- The Willis Solasyphon has a 25yr warranty
- Supported by the Carbon Trust
Incubator Programme
- Heat Exchanger WRAS Certificate
No 0803326

A smarter way to install solar power

No replacement cylinder required

The Willis Solasyphon can be connected to the existing hot water cylinder with two simple connections. This is quicker, cheaper and much more environmentally friendly than the alternative.

Delivers solar heated water in minutes

The unique and innovative feature of the Willis Solasyphon is the way in which it delivers solar heated water directly to the top of the existing hot water cylinder where it stratifies ready for use at a useable temperature.

Produces hot water even in marginal conditions

In marginal or intermittent conditions such as are common in the northern hemisphere, particularly in Autumn, Winter and Spring the Willis Solasyphon will produce useable hot water in a way no other system can at present. One hour's sunshine will produce one hour's worth of hot water at a useable temperature.

Easy Installation

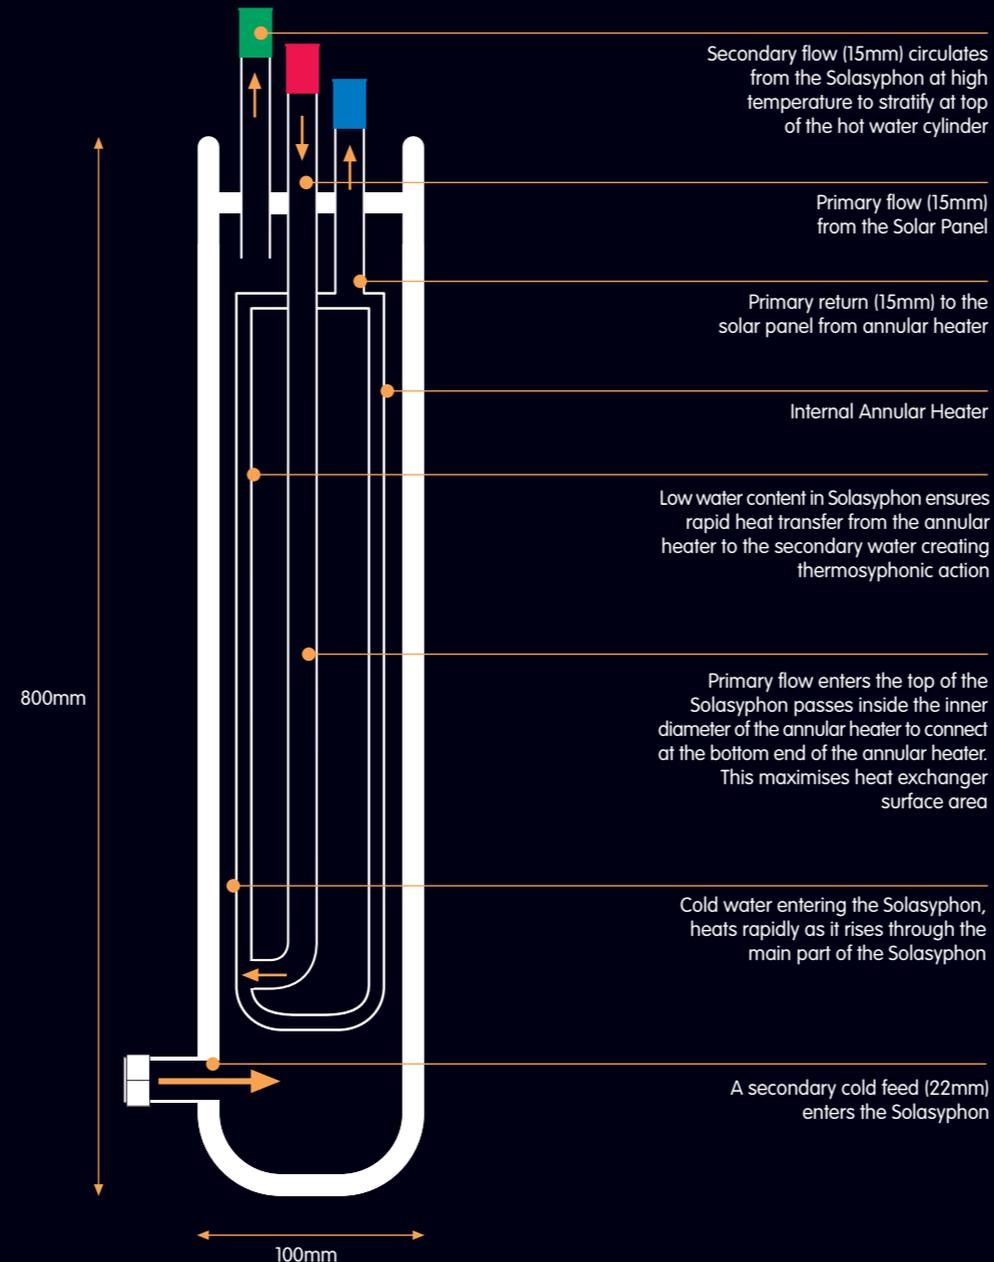

Fitting a Willis Solasyphon to an existing system is quick and easy to install and minimises any possibility of upsetting the existing plumbing system that can occur when you are replacing the existing cylinder with a new solar cylinder.

Eco-Friendly

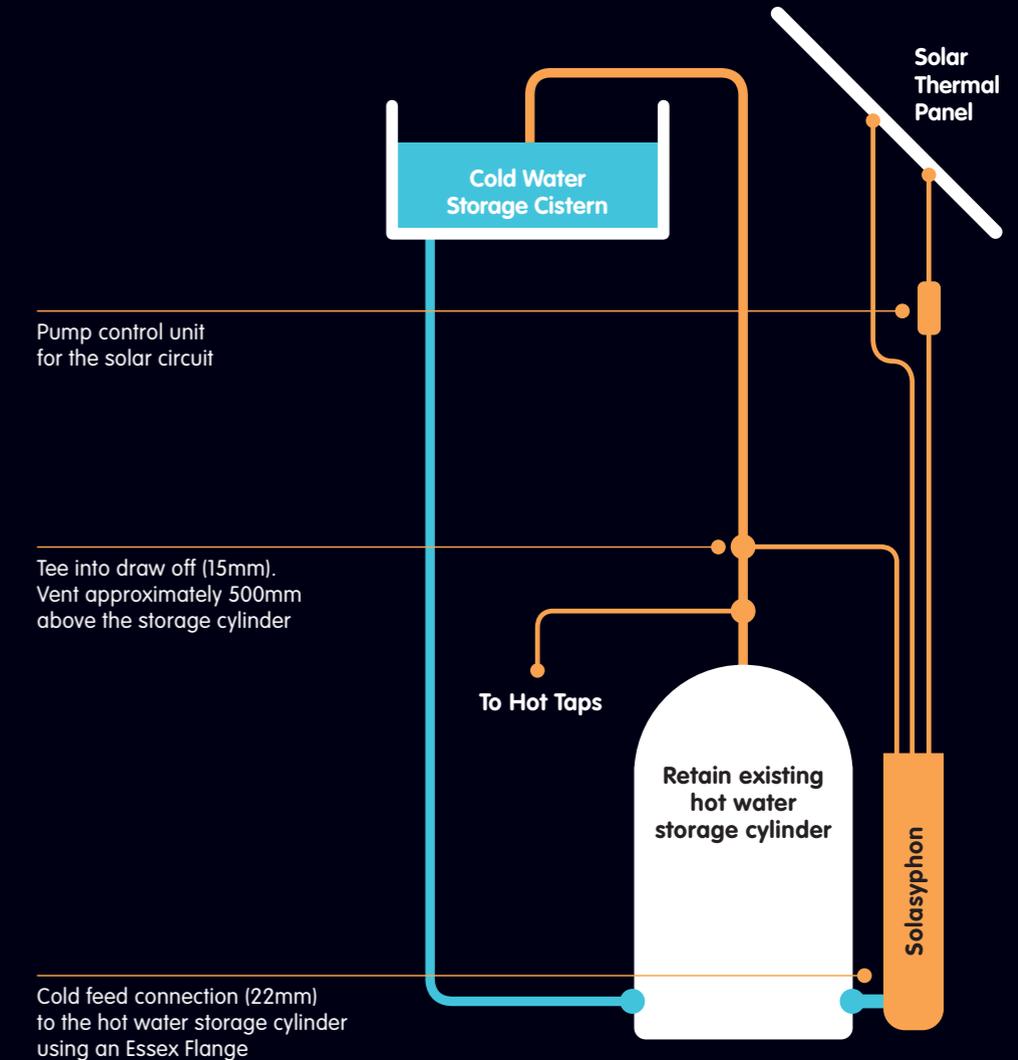

The Willis Solasyphon is much more environmentally friendly than conventional twin coil solar cylinder technology due to the fact that the Syphon is fitted to the existing water heating system, therefore reducing the carbon footprint created by installing the conventional solar cylinder.
